

# Coronavirus Disease 2019 (COVID-19)

# Cases in the U.S.

Last updated on June 20, 2020

TOTAL CASES 2,215,618

32,218 New Cases\*

TOTAL DEATHS

119,055

690 New Deaths\*

## Cases & Deaths by Jurisdiction

38 jurisdictions report more than 10,000 cases of COVID-19.

This map shows COVID-19 cases and deaths reported by U.S. states, the District of Columbia, New York City, and other U.S.-affiliated jurisdictions. Hover over the map to see the number of cases and deaths reported in each jurisdiction. To go to a jurisdiction's health department website, click on the jurisdiction on the map.

### Cases by Age

The following chart shows the age of people with COVID-19. Hover over each bar or click on the plus (+) sign below the chart to see the number of cases in each age group.

Data were collected from 1,919,814 people, and age was available for 1,916,973 (99.9%) people.

View Data					-
	0-17	18-44	45-64	65-74	75+
Number of Cases	98,085	793,595	630,967	182,355	211,971

# Cases by Race/Ethnicity

The following chart shows the race/ethnicity of people with COVID-19. Hover over each bar or click on the plus (+) sign below the chart to see the percentage for each race/ethnicity group. Select from the "Age" dropdown list to see the percentage for each age group.

Data were collected from 1,919,814 people, but race/ethnicity was only available for 921,863 (48.0 %) people. CDC is working with states to provide more information on race/ethnicity for reported cases. The percent of reported cases that include race/ethnicity data is increasing.

#### Filtered by Age: All Ages

Scroll for additional info

33.9%

These data only represent the geographic areas that contributed data on race/ethnicity. Every geographic area has a different racial and ethnic composition. These data are not generalizable to the entire U.S. population.

3.8%

21.4%

1.4%

If cases were distributed equally across racial and ethnic populations, one would expect to see more cases in those populations that are more highly represented in geographic areas that contributed data.

### Cases & Deaths among Healthcare Personnel

Data were collected from 1,919,813 people, but healthcare personnel status was only available for 414,758 (21.6%) people. For the 82,586 cases of COVID-19 among healthcare personnel, death status was only available for 53,100 (64.3%).

CASES AMONG HCP 82,586

DEATHS AMONG HCP
457

Previous Data –

CDC has moved the following information to the Previous U.S. COVID-19 Case Data page.

- Level of community transmission by jurisdiction last updated May 18, 2020
- Total number of cases by day last updated April 28, 2020
- Number of cases by source of exposure last updated April 16, 2020
- Number of cases from Wuhan, China and the Diamond Princess cruise last updated April 16, 2020
- Number of cases by illness start date last updated April 15, 2020

About the Data

### **Updated Daily**

This page is updated daily based on data confirmed at 4:00pm ET the day before.

### Reported by Jurisdiction's Health Department

Data on this page are reported voluntarily to CDC by each jurisdiction's health department. CDC encourages all jurisdictions to report the most complete and accurate information that best represents the current status of the pandemic in their jurisdiction.

#### **Number of Jurisdictions**

There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19. This includes 50 states, District of Columbia, Guam, New York City, the Northern Mariana Islands, Puerto Rico, and the U.S Virgin Islands. New York State's case and death counts do not include New York City's counts as they are separate jurisdictions.

#### **Confirmed & Probable Counts**

As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement is issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease. Nationally notifiable disease cases are voluntarily reported to CDC by jurisdictions.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by one of the following:

- Meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19
- Meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence
- Meeting vital records criteria with no confirmatory laboratory testing performed for COVID19

Not all jurisdictions report confirmed and probable cases and deaths to CDC. When not available to CDC, it is noted as N/A.

### **Accuracy of Data**

CDC does not know the exact number of COVID-19 illnesses, hospitalizations, and deaths for a variety of reasons. COVID-19 can cause mild illness, symptoms might not appear immediately, there are delays in reporting and testing, not everyone who is infected gets tested or seeks medical care, and there may be differences in how jurisdictions confirm numbers.

#### **Changes & Fluctuations in Data**

Health departments may update case data over time when they receive more complete and accurate information.

The number of new cases reported each day fluctuates. There is generally less reporting on the weekends and holidays.

#### Differences between CDC and Jurisdiction Data

If the number of cases or deaths reported by CDC is different from the number reported by jurisdiction health departments, data reported by jurisdictions should be considered the most up to date. The differences may be due to the timing of the reporting and website updates.
